

## **Support profile**

## Air - Support profile

The aluminium profile guarantees stable and dependable support, even with oversized or heavy doors.

Directly screwable plates enable rapid and accurate cabinet mounting, and hinge grooves in the profile ensure swift and easy assembly and installation.

Designed for 16mm or 18mm top and bottom panels, this profile delivers exceptional structural stability and streamlined installation.

Available in two lengths for cabinets 450mm to 600mm, this product ensures versatile application, optimized performance, and reduced assembly time.

An ideal choice to enhance efficiency and precision in furniture assembly.

<b>DEN8LK563T</b>	2 Pairs of bars in titanium finish 4 Plates · 24 Screws	563 mm

## Air - Support profile - assembly

If you are working with particular materials, we advise contacting our technical assistance service for guidance. Please note that Salice cannot be held responsible for issues arising from the use of alternative screws not supplied or improper installation.

Once the top and base panels are milled, fix the profile support plates

Insert the profile into the plates and the cabinet groove. We recommend using a low-expansion, single-component polyurethane glue, suitable for fixing wood and metal.

Once installation has been completed, insert and fix the hinges into the profile.
