SALICE

TILT - System for flap doors with upward or downward opening

Compactness and versatility.

Discreet, compact and essential, Tilt is the mechanism for flap doors that combines design, precision and versatility. It delivers high-level performance with extreme compact dimensions.
Designed for wooden doors and side panels, it is now also available for aluminium doors.
Tilt offers maximum application flexibility with three mounting options: external with cover, recessed into the cabinet side, and flush recessed with cover.
Solutions developed to meet different construction and aesthetic requirements, always ensuring an elegant and discreet result.

Precision and elegance.

The 3-way door adjustment ensures precise alignment and long-lasting stability.
The possibility to calibrate the spring force allows the opening and closing movement to be optimized, providing smooth, controlled and customizable motion.
The covers, available in several elegant finishes, allow perfect aesthetic integration with the cabinet.
